

• HELP PREVENT AN OVERDOSE •

GET NALOXONE NOW

WHAT IS NALOXONE/ NARCAN?

- **Naloxone** is a medication that can prevent overdose by temporarily stopping the effect of opioids (ie. **Heroin, Fentanyl, Codeine, Oxycodone, Methadone, etc.**) by allowing breathing to resume and reversing the overdose

HOW TO REVERSE OVERDOSE WITH NALOXONE

- When someone is unresponsive, **call 911**.
- **Administer Naloxone**. Insert nasal Naloxone into the nostril and spray. If using intramuscular Naloxone, draw up dose and inject into upper arm or thigh muscle.
- **If no response in 3 minutes, give a second dose**, if available.
- Do rescue breathing until help arrives.

WHERE CAN I GET NALOXONE?

- You can get Naloxone through local health providers and pharmacies or for free at **HIV Alliance Syringe Exchange** operations at 647 W. Luellen Dr, Suite 103, Roseburg, OR.
- Monday - Wednesday, 11:00 am - 4:00 pm
