

Immunization is Cancer Prevention

DID YOU KNOW...

The American Cancer Society recommends that all children get vaccinated against HPV between the ages of 9 and 12 to help prevent **six types** of cancer.

Age Matters

- When you vaccinate your child **on time**, you help protect them from HPV cancers.
- HPV vaccination works best when given **before age 13**.
- Vaccination at the recommended ages will **prevent more cancers** than vaccination at older ages.

Helping fight cancer for

20
years

In just 5 - 6 years after HPV vaccination became available, studies found...

HPV infections **dropped significantly**

&

there was a **lowered risk** of cervical pre-cancer

On Time Ages 9-12

2 Doses
6-12 months
apart

Late Ages 13-14

2 Doses
6-12 months
apart

Catch Up & Late Ages 15-26

3 Doses
1st dose at visit one
2nd dose 1-2 months later
3rd dose 6 months
after 1st dose
